Portfolio Project

Analysis of Radio Promotion Budget Impact on Sales Using Linear Regression

- Conducted exploratory data analysis and linear regression to assess the relationship between radio promotion budget and sales performance.
- Developed a simple linear regression model to interpret key metrics such as slope, y-intercept, and statistical significance.
- Identified a statistically significant relationship showing that a 1 million dollar increase in radio promotion budget is associated with an 8.17 million dollar increase in sales, providing actionable insights for marketing strategy.

Covid-19 Data Analysis with BigQuery

- Analyzed the COVID-19 dataset using SQL in BigQuery, revealing global totals of 770,644,152 cases and 6,963,700 deaths, comprising 0.9036 percent of the world's population.
- Utilized SQL queries to identify the United States as the country with the highest death toll, totaling 1,127,152 deaths.
- Aggregated data by continent, highlighting North America as the most affected continent with a total death count of 1,127,152.

BELLA BEAT DATA ANALYSIS/Casestudy

- Conducted an extensive data analysis project using Excel, SQL, and R, leveraging a COVID-19 dataset with BigQuery.
- Discovered that Bella beat users averaged 7,637.911 daily steps (below the 8,000-step goal). Recommended user engagement strategies and benefits for reaching the target.
- Contributed to Bellabeat's smart device market competitiveness by providing data-driven insights and strategic solutions.
